About this job

Introduction

We are a dynamic team in a fast-growing environment. We work with the latest technology and use **GenAI** and **automation** to make small and medium-sized companies more productive.

We work on diverse projects with startups, small and medium-sized companies and are constantly adapting to new tech stacks.

As an elementary building block for further growth, we are looking for a flexible developer who is familiar with CI/CD pipelines, cloud architectures and working with large language models.

Precisely because we are still at the beginning, you have great creative potential and enormous personal growth potential with us.

Log in

- Development of GenAI solutions for our customers
- contact person for the technical requirements of our projects
- independent deployment of software solutions into our customers' infrastructure
- Use APIs from third-party systems to provide data for AI solutions
- So if you are keen to help develop the software solutions of tomorrow with GenAI, want to take on responsibility and are always looking for new challenges, you have come to the right place!

qualification

- **You have a "can-do" mentality and are not afraid of new challenges!**
- You have experience with modern backend frameworks and technologies such as Express.js, NestJS or similar
- You have knowledge of database technologies such as MongoDB, PostgreSQL or MySQL
- You have an understanding of RESTful API design and GraphQL
- You speak fluent German and English and have very good expression
- Last but not least: You are a pragmatist → You just tackle things and don't want to spend a long time discussing them!
- Bonus: Your last degree was a maximum of 2 years ago (can also have been a distance learning course)
- Bonus: You can also step in and support frontend projects (React)

Benefits

- Growth mentality and high quality: Become part of an ambitious team in a fast-growing environment
- Real responsibility: You can make decisions about tech stack, architecture and AI algorithms right from the start
- Working with the latest GenAI technology: Our aim is to understand and apply the latest developments
- Continuous development: Through the diversity of projects, you will continually learn about new technologies and activities
- Flat hierarchies and open communication: We are always ready for open discussions
- Equipment: Company laptop of your choice

A few words in conclusion

We support you in realizing your potential in this area and in contributing your ideas!

If you are interested in this **hot topic** and want to **develop software on your own initiative** , then you have come to the right place!

Salary range

Provided by the company

€57,000 €73,000
